## ABSTRACT:

PURPOSE: To prepare a cosmetic composition for makeup having a high content of a silicone wax without requiring the addition of a surfactant by dispersing the silicone wax into an aqueous phase containing two types of water-soluble acrylic polymers.

CONSTITUTION: This stable dispersion of a silicone wax containing &gtr;10 wt.% of a silicone wax is prepared in an aqueous phase by using two types of acrylic polymers. The first acrylic polymer comprises at least one copolymer of a 3-6C single double bond-containing acid or its acid anhydride and a long-chain acrylic ester and the other polymer comprises at least one homopolymer of acrylic acid or its salt or a copolymer thereof (except a copolymer of acrylic acid and a long-chain acrylic ester and its salt). The dispersion contains up to 60 wt.% of the silicone wax. The composition is used for a cosmetic composition and suitable for, e.g. a foundation, an eye shadow or a rouge.

## ABSTRACT:

PROBLEM TO BE SOLVED: To obtain a rouge composition by containing nonaqueous system polymer dispersion, which disperses a polymer into a volatile silicone, and a fluorine modified silicone.

SOLUTION: This rouge composition contains nonaqueous system polymer dispersion, which disperses a polymer into a volatile silicone, and a fluorine modified silicone of formula I (Rf is a 1-12C perfluoroalkyl; (a) is 0-5; (m) is 1-500; (n) is 0-500) or a fluorine modified methylphenylpolysiloxane of formula II ((l) is 1-150). By formulating above nonaqueous polymer dispersion, this composition is excellent in easiness of application, smell in applying, viscosity and gloss on lips, causes no color migration to coffee caps and cloths and is extremely excellent in cosmetic durability. Further, by formulating compounds of formula I and II, viscosity and color migration to coffee caps and cloths are more improved and easiness of application, smell in applying, viscosity, gloss and cosmetic durability become extremely excellent.

## ABSTRACT:

PROBLEM TO BE SOLVED: To prepare a makeup cosmetic having excellent effects on lasting of makeup by including a nonaqueous polymer dispersion containing a polymer dispersed in a volatile silicone therein.

SOLUTION: This makeup cosmetic comprises a nonaqueous polymer dispersion containing a sucrose ester of benzoic acid together with a polymer dispersed in a volatile silicone represented by formula I [(n) is 3-7] or formula II [(m) is 0-5] as a film-forming ingredient. Furthermore, a fluorine-modified silicone and a fluorine-modified methylphenylpolysiloxane are preferably compounded therein. The polymer is preferably an ester polymer of acrylic acid or methacrylic acid or a copolymer of an acrylic ester and a methacrylic ester. The resultant cosmetic is good in odor at the time of coating, luster, water and oil resistances and adhesion after the coating and is especially preferred as an eyeliner, a mascara, an eyebrow, a nail enamel, a lipstick, a foundation, an eye shadow, etc.

## ABSTRACT:

PROBLEM TO BE SOLVED: To obtain a skin cosmetic having an extremely excellent skin-protecting effect by adding a non-aqueous polymer dispersion produced by dispersing a polymer in an organic solvent.

SOLUTION: A non-aqueous polymer dispersion is produced by dispersing (A) a polymer preferably selected from a polymer of a (meth)acrylic acid ester, a vinyl-containing silicone or a vinylidene-containing silicone, a copolymer having a (meth)acrylic acid ester unit, a vinyl-containing silicone unit or a vinylidene-containing silicone unit, etc., in (B) an organic solvent preferably consisting of a volatile silicone of the formula I ((m) is 0-5) or the formula II ((n) is 3-7). The compositional ratio of A:B is preferably 1:25 to 6:1, more preferably 1:7 to 2:1. The amount of the polymer dispersion to be compounded to a skin cosmetic is preferably 0.1-70wt.%.

## ABSTRACT:

PROBLEM TO BE SOLVED: To obtain a hair cosmetic having a high hair setting effect and being capable of highly maintaining the hair set firm at a high humidity by blending a specific non-aqueous polymer dispersion.

SOLUTION: This hair cosmetic is blended with a non-aqueous polymer dispersion obtained by dispersing a polymer in an organic solvent. As the organic solvent, one or more than two kind(s) of volatile silicone expressed by formula I ((m) is 0 to 5) or formula II ((n) is 3 to 7) is preferable. As the polymer, acrylic ester, methacrylic ester, vinyl group-containing silicone or vinylidene group-containing silicone, etc., is preferable. The non-aqueous polymer dispersion is obtained by radical polymerization of a radical polymerizable monomer in an organic solvent using a radical polymerization initiator. The blending amount of the non-aqueous polymer dispersion is 0.1 to 70wt.%.
